

ECO-FLEX ECO-400

The ECO-400 is the largest ECO-Flex wet/dry combo blaster we offer. Built for demanding commercial and industrial projects, it combines a 4.0-cubic-foot blast pot with the flexibility to switch between wet and dry abrasive blasting using one rugged, easy-to-operate system.

With a media capacity of 200 to 250 pounds and up to two hours of run time, the ECO-400 keeps operators blasting longer between refills. It's the ideal step up for contractors and industrial facilities that have outgrown smaller portable systems but still want the versatility and efficiency of ECO-Flex technology.

FEATURES:

MAX CAPACITY FOR YOUR BIGGEST PROJECTS

The ECO-400's increased media capacity and extended runtime mean fewer refills and more time spent getting the job done. Designed for high-volume tasks, it's the ideal choice for professionals who need efficiency and productivity on large-scale projects.

DRY TO DUSTLESS IN THE FLICK OF A SWITCH

The ECO-400 gives contractors the flexibility to switch between wet and dry abrasive blasting with the flick of a switch. With one compact system, operators can switch from dry blasting to wet blasting without changing equipment, helping save time, reduce setup and keep projects moving.

BUILT FOR THE TOUGHEST JOBS

With its durable all-steel construction, the ECO-400 is rugged enough to withstand the demands of harsh environments. Its portability ensures it can go wherever you need it, from job sites to hard-to-reach areas, while maintaining reliability and production.

SPECIFICATIONS

ECO-400

Pot Size:	4.0 cu. ft.
Weight:	382 lbs. (empty)
Media Usage:	150-200 lbs. per hr.
Water Usage:	12-15 gal. per hr.
Media Capacity:	200-250 lbs.
Hose Length:	50' blast hose standard, up to 150' with ext
Run Time:	90-120 min.
Blast Pressure Range:	5-125 psi
Minimum Air Supply:	185 CFM
Water Tank:	Sold separately
